BodyARMOUR

PROTECTION THAT COVERS MORE . WEIGHTS LESS

UniRay

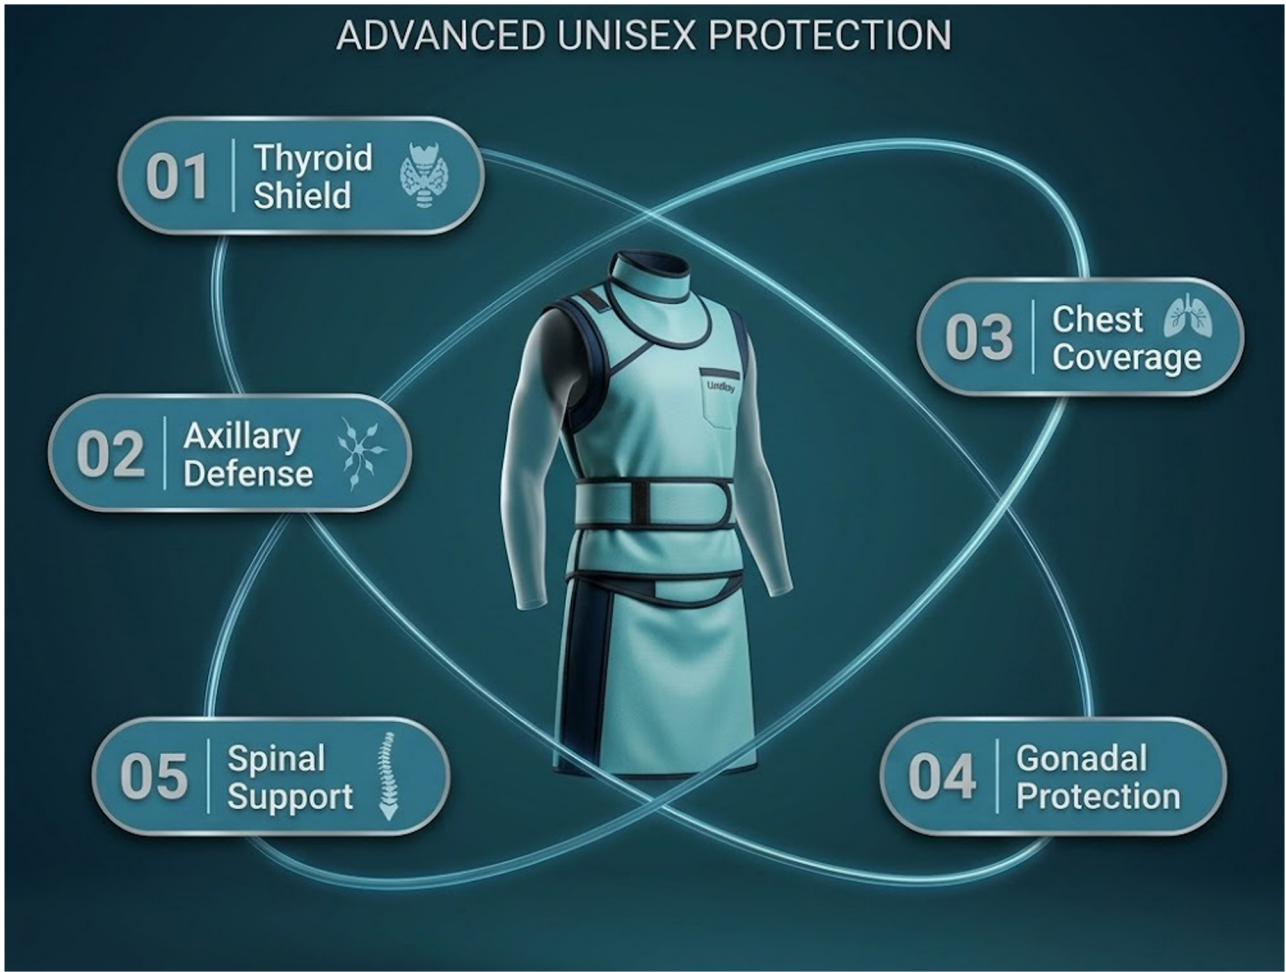

Protection designed around the human body for Everyone

BODYARMOUR is engineered to provide extended X-ray protection across key anatomical regions, including the thyroid, chest and breast tissue, axillary region, reproductive organs and Bone marrow.

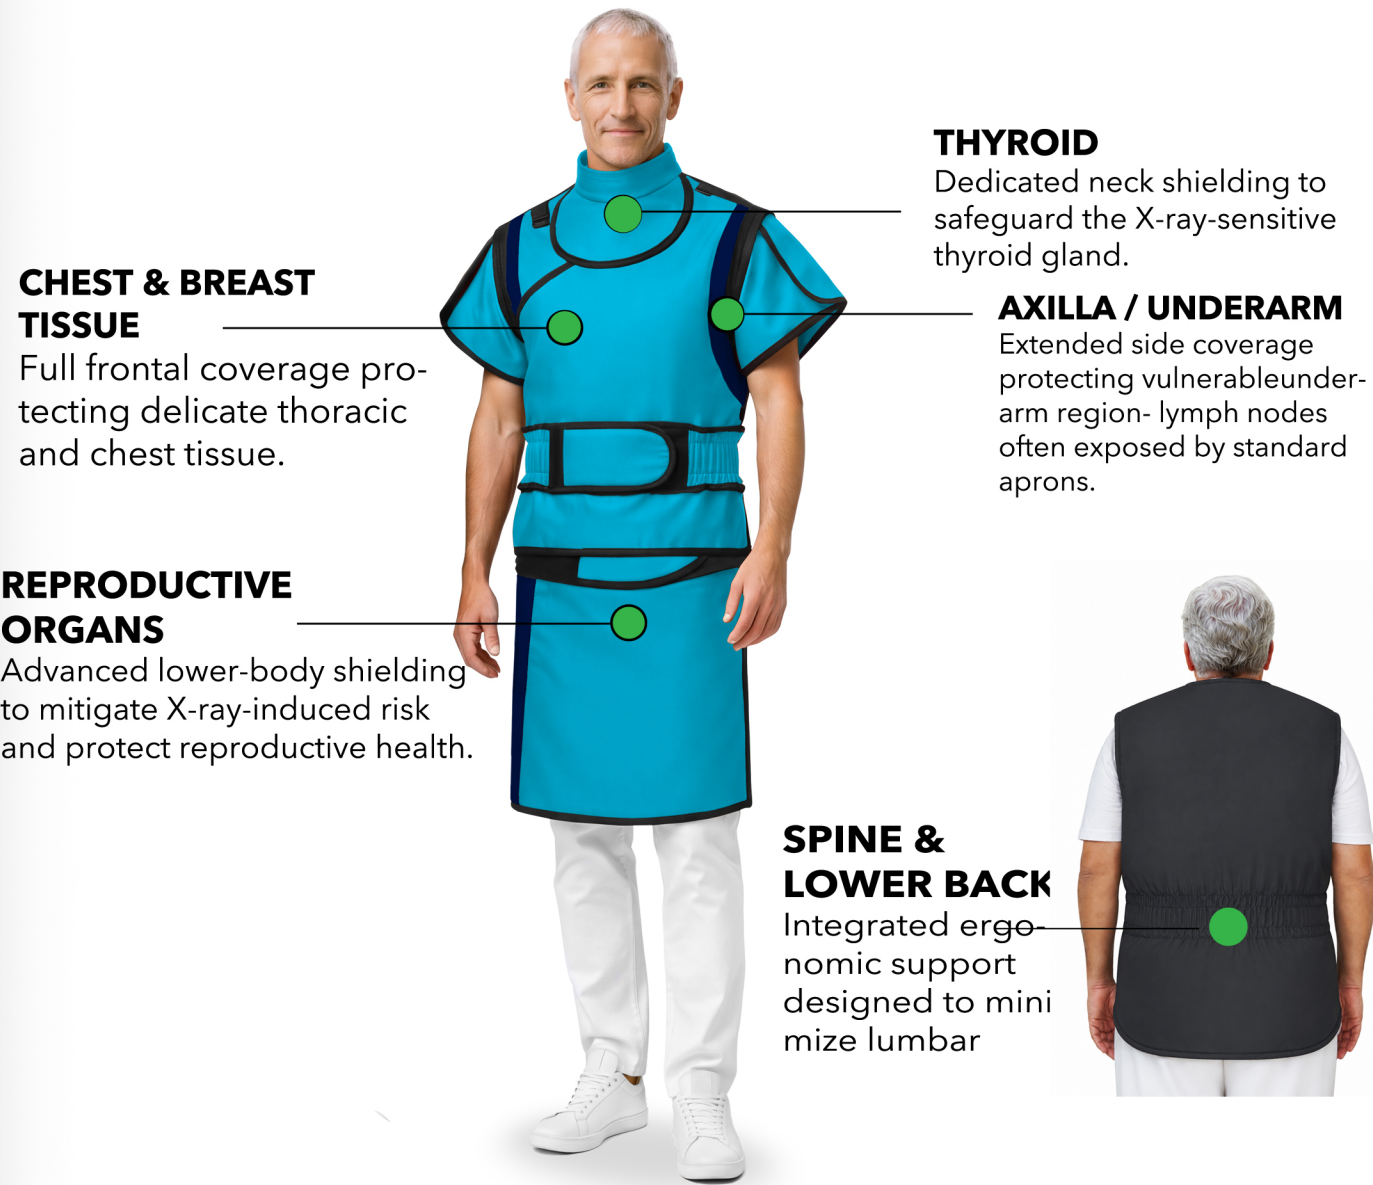

Integrated **BackSAVER®** technology redistributes garment weight across the body, helping reduce the load on the shoulders and back by **up to 50%.**

The result is a protective system designed to support you throughout prolonged procedures for greater coverage, improved weight distribution and enhanced comfort during prolonged procedures.

BodyARMOUR – Lightest full-body X-ray protection

BodyARMOUR is built to safeguard cumulative X-ray exposure. Its anatomical design follows the contours of the body to provide integrated protection across key exposure-sensitive regions—without relying on multiple add-on panels.

ANATOMICAL UNISEX FIT: Seamless 360° protection designed for effortless mobility across all body types.

Outlast® Thermal Comfort (Optional): Integrated with NASA-developed Outlast® phase-change technology for proactive temperature regulation and cooling during long procedures.
